Project Overview

This report is part of semestral work for subject Ethical hacking of the Information Security program on FIT,
CTU.
The focus is to assert skills gained during the semester as well as use them in real-world scenario. The
website twitter.com has been chosen for this purpouse as it offers a bug bounty and is therefore eligible
for ethical hackers to try and hack.

Scope Description

We will be focusing on the web application on domain twitter.com.
While the bug bounty posted by twitter puts some vulnerabilities out scope for financial reward we will still
be trying to perform these attacks as to deepen our ethical hacking skills.
